

ENVIRONMENTAL POLICY

CAP Industries delivers pump systems and pump control solutions throughout Australia and New Zealand. We are committed to delivering to the highest standards possible in terms of product quality, occupational health and safety and environmental management.

To achieve this, it is CAP Industries' policy to conduct our activities in a manner that has the least possible impact on the environment.

In implementing this policy, CAP Industries will work to:

- employ processes that minimise consumption of resources such as energy and water;
- minimise waste by rethinking, reducing, reusing, repairing and recycling;
- ensure environmental considerations form part of our business planning and decision-making processes;
- promote a culture of responsible environmental management amongst employees, customers and suppliers;
- continually improve performance through regular education and training;
- monitor advances in technology with the aim of continual product improvement; and
- comply with applicable environmental laws and regulations and aspire to higher standards within the business.

This policy will be communicated to all employees, customers and suppliers through posting on internal noticeboards and our website.

We will annually, or when required, review our environmental objectives and targets. Employees and management will be encouraged to collaborate closely to continually refine our work practices to reach best practice standards.

Bou Spithoven
Managing Director
