

## **MCCRACKENS BAYSWATER CHOOSES RWP SYSTEMS FOR NO-MIXING GUARANTEE**

McCrackens Water Services in Bayswater, Victoria deliver specialised pumping, water and irrigation services to trade and retail customers in Melbourne's outer eastern suburbs. Over the past 18 months, the team has sold and installed approximately 50 systems from the RWP and RWPI series of Rainwater Pump Systems. According to Branch Manager, Tim Johnston, the decision to sell and recommend the systems was made after significant internal testing and evaluation.

"We use the RWP and RWPI systems wherever possible because quite frankly they do exactly what they claim to do," he explains.

The majority of rainwater pump systems sold by McCrackens' Bayswater branch involve domestic applications – builders or home owners who are using rainwater for toilet flushing, laundry and/or irrigation uses. According to Mr Johnston, the RWP systems offer these customers several key advantages including the flexibility to choose their own pump and the guarantee that when rainwater is available, no mains water will be used.

"Many of our customers are keen to ensure they adhere strictly to mains water use regulations," explains Mr Johnston. "For these customers, the RWP systems are the only solution I will offer that can guarantee no mixing of rainwater and mains."
